Date _____

Calc I H - 1.4 day 3 - Continuity & IVT Group Work

Period _____

1. Use the IVT to prove that $g(x) = x^2 - 3x + 1$ has a 0 in the interval $[-1, 2]$.

$g(x)$ is continuous on $[-1, 2]$ since it is a polynomial function.

$$\left. \begin{aligned} g(-1) &= (-1)^2 - 3(-1) + 1 = 6 > 0 \\ g(2) &= (2)^2 - 3(2) + 1 = -1 < 0 \end{aligned} \right\} \begin{array}{l} \text{Since } g(x) \text{ is cont on } [-1, 2] \text{ and } g(2) < 0 < g(-1), \\ \text{by the IVT there exists } x=c \text{ such that} \\ g(c) = 0. \end{array}$$

2. Use the IVT to prove that $h(x) = \frac{x-3}{x^2-9}$ has $h(c) = \frac{1}{2}$ in the interval $[-2, 2]$.

$h(x)$ is continuous everywhere except when $x = \pm 3$, $\therefore h(x)$ is cont on $[-2, 2]$.

$$\left. \begin{aligned} h(-2) &= \frac{-2-3}{(-2)^2-9} = \frac{-5}{-5} = 1 \\ h(2) &= \frac{2-3}{2^2-9} = \frac{-1}{-5} = \frac{1}{5} \end{aligned} \right\} \begin{array}{l} \text{Since } h(x) \text{ is cont on } [-2, 2] \text{ and } h(2) < \frac{1}{2} < h(-2) \\ \text{by the IVT there exists } x=c \text{ such that} \\ h(c) = \frac{1}{2}. \end{array}$$

3. Find a so that each function is continuous on $(-\infty, \infty)$. Use the definition of continuity to support your answer.

a. $h(x) = \begin{cases} ax+4, & x < 3 \\ 7-2x, & x \geq 3 \end{cases}$

$$\lim_{x \rightarrow 3^-} h(x) = \lim_{x \rightarrow 3^+} h(x)$$

$$3a+4 = 7-2(3)$$

$$3a+4 = 1$$

$$3a = -3$$

$$\boxed{a = -1}$$

When $a = -1$, $h(3) = -(3)+4 = 1$

$$\lim_{x \rightarrow 3^-} h(x) = \lim_{x \rightarrow 3^+} h(x) = 1$$

$$\therefore h(3) = \lim_{x \rightarrow 3} h(x) \checkmark$$

b. $g(x) = \begin{cases} \frac{2}{3}x-5, & x \leq -1 \\ ax+2, & x > -1 \end{cases}$

$$\lim_{x \rightarrow -1^-} g(x) = \lim_{x \rightarrow -1^+} g(x)$$

$$-\frac{2}{3} - 5 = -a + 2$$

$$-\frac{17}{3} = -a + \frac{6}{3}$$

when $a = \frac{23}{3}$, $g(-1) = -\frac{2}{3} - 5 = -\frac{17}{3}$

$$\lim_{x \rightarrow -1^-} g(x) = -\frac{17}{3} = \lim_{x \rightarrow -1^+} g(x) = -\frac{23}{3} + 2$$

$$\therefore g(-1) = \lim_{x \rightarrow -1} g(x) \checkmark$$

$$\begin{aligned} -a &= \frac{-23}{3} \\ a &= \frac{23}{3} \end{aligned}$$

4. Explain why you cannot use the Intermediate Value Theorem to prove that $p(x) = \frac{1}{x-2}$ has a 0 in the interval $[1, 4]$.

Since $p(x)$ is undefined at $x = 2$, $p(x)$ is NOT continuous on $[1, 4]$ so IVT does not apply.

5. Find a and b so that the function is continuous on the entire real number line.

$$p(x) = \begin{cases} 3, & x < -2 \\ ax+b, & -2 \leq x \leq 2 \Rightarrow \frac{1}{2}x+4 \\ 5, & x > 2 \end{cases}$$

$$\lim_{x \rightarrow -2^-} p(x) = \lim_{x \rightarrow -2^+} p(x)$$

$$3 = -2a + b$$

$$\lim_{x \rightarrow 2^-} p(x) = \lim_{x \rightarrow 2^+} p(x)$$

$$2a + b = 5$$

$$\begin{aligned} 3 &= -2a + b \\ + 5 &= 2a + b \end{aligned}$$

$$8 = 2b$$

$$4 = b$$

$$\text{Then } 3 = -2a + 4$$

$$-1 = -2a$$

$$\frac{1}{2} = a$$

Check:

$$p(-2) = \frac{1}{2}(-2) + 4 = 3$$

$$\lim_{x \rightarrow -2^-} p(x) = 3 = \lim_{x \rightarrow -2^+} p(x)$$

$$\text{So } p(-2) = \lim_{x \rightarrow -2} p(x) \checkmark$$

$$p(2) = \frac{1}{2}(2) + 4 = 5$$

$$\lim_{x \rightarrow 2^-} p(x) = 5 = \lim_{x \rightarrow 2^+} p(x)$$

$$\text{So } p(2) = \lim_{x \rightarrow 2} p(x) \checkmark$$

6. For each function below identify any discontinuities and give the type and reason for each.

<p>a. $f(x) = \frac{1}{x-2}$</p> <p>Nonremovable, infinite disc at $x=2$</p> $\lim_{x \rightarrow 2^-} f(x) = -\infty$ $\lim_{x \rightarrow 2^+} f(x) = \infty$ <p>$\left. \begin{array}{l} \lim_{x \rightarrow 2^-} f(x) = -\infty \\ \lim_{x \rightarrow 2^+} f(x) = \infty \end{array} \right\} \begin{array}{l} \lim_{x \rightarrow 2} f(x) \\ \text{DNE} \end{array}$</p> <p>$f(2)$ und</p>	<p>b. $g(x) = \frac{x^2 - x + 6}{x^2 + x - 12}$</p> $g(x) = \frac{(x-3)(x+2)}{(x+4)(x-3)} = \frac{x+2}{x+4}$ <p>Removable hole disc at $x=3$</p> <p>$f(3)$ und, $\lim_{x \rightarrow 3} f(x) = \frac{5}{7}$</p> <p>Nonremovable infinite disc at $x=-4$</p> $\lim_{x \rightarrow -4^-} f(x) = \infty$ $\lim_{x \rightarrow -4^+} f(x) = -\infty$ <p>$\left. \begin{array}{l} \lim_{x \rightarrow -4^-} f(x) = \infty \\ \lim_{x \rightarrow -4^+} f(x) = -\infty \end{array} \right\} \begin{array}{l} \lim_{x \rightarrow -4} f(x) \\ \text{DNE} \end{array}$</p> <p>$f(-4)$ und</p>	<p>c. $h(x) = \begin{cases} 3x+4, & x \leq 1 \\ x^2-5, & x > 1 \end{cases}$</p> <p>$\lim_{x \rightarrow 1^-} h(x) = 7, \lim_{x \rightarrow 1^+} h(x) = -4$</p> <p>$\lim_{x \rightarrow 1} h(x) \text{ DNE} \Rightarrow$</p> <p>Nonremovable Jump disc at $x=1$</p> <p>$h(1) = 7$</p>
<p>d. $p(x) = \frac{3}{x+4}$</p> <p>Nonremovable Infinite disc at $x=-4$</p> $\lim_{x \rightarrow -4^-} p(x) = -\infty$ $\lim_{x \rightarrow -4^+} p(x) = \infty$ <p>$\left. \begin{array}{l} \lim_{x \rightarrow -4^-} p(x) = -\infty \\ \lim_{x \rightarrow -4^+} p(x) = \infty \end{array} \right\} \begin{array}{l} \lim_{x \rightarrow -4} p(x) \\ \text{DNE} \end{array}$</p> <p>$p(-4)$ und</p>	<p>e. $q(x) = \frac{2x^2 - 7x - 4}{x^2 + 2x - 24}$</p> $q(x) = \frac{(2x+1)(x-4)}{(x+6)(x-4)} = \frac{2x+1}{x+6}$ <p>Removable hole disc at $x=4$</p> <p>$q(4)$ und</p> <p>Nonremovable infinite disc at $x=-6$</p> $\lim_{x \rightarrow -6^-} q(x) = \infty$ $\lim_{x \rightarrow -6^+} q(x) = -\infty$ <p>$\left. \begin{array}{l} \lim_{x \rightarrow -6^-} q(x) = \infty \\ \lim_{x \rightarrow -6^+} q(x) = -\infty \end{array} \right\} \begin{array}{l} \lim_{x \rightarrow -6} q(x) \\ \text{DNE} \end{array}$</p> <p>$q(-6)$ und</p>	<p>f. $r(x) = \begin{cases} -2x, & x \leq -3 \\ -x+3, & -3 < x < 2 \\ x^3, & x \geq 2 \end{cases}$</p> <p>$\lim_{x \rightarrow -3^-} r(x) = 6 = \lim_{x \rightarrow -3^+} r(x)$</p> <p>$r(-3) = 6 = \lim_{x \rightarrow -3} r(x)$</p> <p>Continuous at $x=-3$</p> <p>Nonremovable, jump disc at $x=2$</p> <p>$\lim_{x \rightarrow 2^-} r(x) = -1 \neq \lim_{x \rightarrow 2^+} r(x) = 8$</p> <p>$r(2) = 8$</p>
